MY TIME AWAY SYSTEM
System Requirements Specification

1.Business-Requirement:

1.1 Problem Statement:

My Time Away Application is a simple .Net Core 7.0 RESTFUL Web API application with MS SQL server. "My Time Away" is a comprehensive employee leave management application designed to streamline and simplify the process of managing employee leave requests within an organization. This application provides an efficient and user-friendly platform for both employees and managers to handle leave requests, ensuring a seamless workflow while maintaining compliance with company policies.

1.2 Following is the requirement specification:

	My Time Away Application
1	Employee
Employee Leave Module Functionalities	
	1.Create a leave
	2.Can delete a leave
	3.Get leave Info by id
	4.Fetch all leaves
	5.Update leave details
	6.Cancel leave
	7.Reject leave
	8.Approve leave
	9.Search leave by employee id, employee name, days

2. Assumptions, Dependencies, Risks / Constraints

2.1 Employee Leave Constraints

- While adding a leave details, if leave is already existing, it should throw a custom exception
- While deleting the leave, ensure that leave already exists, if not, the operation should throw a custom exception

2.3 Common Constraints

- For all rest endpoints receiving @RequestBody, validation check must be done and must throw custom exception if data is invalid
- All the database operations must be implemented on entity object only
- Do not change, add, remove any existing methods in service layer
- In Repository interfaces, custom methods can be added as per requirements.
- All RestEndpoint methods and Exception Handlers must return data wrapped in ResponseEntity

- **All business logic CRUD operations under repository class and write your business logic validation in Services class and related validation use proper user defined exceptions mentioned in above document.**
- **Controller must validate before processing any logic on the database.**

2.4 Visitors can perform the follow actions

- Allows to add a new leave
- Allows to delete an existing leave
- Allows to update leaves details
- Allows to search the leave on the basis of name,id,days
- Allows to display all leaves
- Allows to cancel leave
- Allows to reject leave
- Allows to cancel leave

2.5 ToolChain

- .NET Core 7.0, RESTful Web API, MS SQL Server.

3. Business Validations

3.1 Employee Leave Class Entities

- Id (long) must be not null and unique, key attribute
- Employee Id (string) is not null, min 3 and max 100 characters.
- Employee Name (string) is not null, min 3 and max 100 characters.
- Employee Email (string) is not null, min 3 and max 100 characters.
- Employee phone (string) is not null, min 3 and max 100 characters.
- Manager Email (string) is not null, min 3 and max 100 characters.
- From Date (DateTime) is not null.
- To Date (DateTime) is not null.
- Reason (string) is not null, min 3 and max 100 characters.
- Total Days (int) is not null, min 3 and max 100 characters.
- Is Processed (bool) is not null.
- Status (string) is not null, min 3 and max 100 characters.

4. Considerations

- For Role of application users must be used: -
    1. Employee

5. Rest Endpoints

Rest End-points to be exposed in the controller along with method details for the same to be created

5.1 DepartmentController

<table>
<tr><th>URL Exposed</th><th>Purpose</th></tr>
<tr><td>/create-leave<table><tr><td>Http Method</td><td>Post</td></tr><tr><td>Parameter 1</td><td>EmployeeLeave model</td></tr><tr><td>Return</td><td>HttpResponse status code</td></tr></table></td><td>Add new leave Details</td></tr>
<tr><td>/update-leave<table><tr><td>Http Method</td><td>PUT</td></tr></table></td><td>Update existing leave Details</td></tr>
</table>

	Parameter 1 | EmployeeLeaveViewModel model Return | HttpResponse status code |	
/delete-leave Http Method | DELETE Parameter 1 | Long id Return | HttpResponse status code		Delete leave with given id.
/get-leave-by-id Http Method | GET Parameter 1 | Long id Return | <EmployeeLeave>		Fetches the leave Details with the given id
/get-all-leaves Http Method | GET Parameter 1 | - Return | <<IEnumerable<EmployeeLeave>>		Fetches all the leaves Details
/search-leaves Http Method | GET Parameter 1 | String employeeId Parameter 2 | String employeeName Parameter 3 | Int totalDays Return | <EmployeeLeave>		Fetches the leave Details with the given id, name and days
/cancel-leave Http Method | PUT Parameter 1 | Long id Return | <EmployeeLeave>		Cancel the leave with the given id
/reject-leave Http Method | PUT Parameter 1 | Long id Return | <EmployeeLeave>		Reject the leave with the given id
/approve-leave Http Method | PUT Parameter 1 | Long id Return | <EmployeeLeave>		Approve the leave with the given id

6. Template Code Structure

6.1 Package: MyTimeAway

Resources

Names	Resource	Remarks	Status
Package Structure			
controller	EmployeeLeave Controller	Controller class to expose all rest-endpoints for auction related activities.	Partially implemented
program.cs	Startup CS file	Contain all Services settings and SQL server Configuration.	Already Implemented
Properties	launchSettings.json file	All URL Setting for API	Already Implemented
	appsettings.json	Contain connection string for database	Already Implemented

6.2 Package: MyTimeAway.BusinessLayer

Resources

Names	Resource	Remarks	Status
Package Structure			
Interface	IEmployeeLeaveService, interface	Inside all these interface files contains all business validation logic functions.	Already Implemented
Service	EmployeeLeaveService CS file	Using this all class we are calling the Repository method and use it in the program and on the controller.	Partially Implemented
Repository	IEmployeeLeaveRepository EmployeeLeaveRepository CS file and interface.	All these interfaces and class files contain all CRUD operation code for the database. Need to provide implementation for service related functionalities	Partially Implemented

ViewModels	EmployeeLeaveViewModel,	Contain all view Domain entities for show and bind data. All the business validations must be implemented.	Already Implemented

6.3 Package: MyTimeAway.DataLayer

Resources

Names	Resource	Remarks	Status
Package Structure			
DataLayer	MyTimeAwayDbContext cs file	All database Connection and collection setting class	Already Implemented

6.4 Package: MyTimeAway.Entities

Resources

Names	Resource	Remarks	Status
Package Structure			
Entities	EmployeeLeave, CS file	All Entities/Domain attribute are used for pass the data in controller. Annotate this class with proper annotation to declare it as an entity class with **Id** as primary key. Generate the **Id** using the **IDENTITY** strategy	Already Implemented

6.5 Package: MyTimeAway.Tests

Resources

The MyTimeAway.Tests project contains all test case classes and functions for code evaluation. Don't edit or change anything inside this project.

7. Execution Steps to Follow

1. **To open project in Visual Studio 2022 :**
   - **Open cloned project folder (You will see the project folder name on desktop with your logged in email id)**
   - **Go to MyTimeAway/ MyTimeAway.sln**
   - **Open with Visual Studio 2022**

2. **To open the command terminal the test takers need to go to the Application menu (Top Horizontal Menu Bar) View →Terminal.**

3. **On command prompt, cd into your project folder (cd <Your-Project-folder>).**

4. **To build your project use command:**
   (MyTimeAway /dotnet build)

5. **To launch your application, Run the following command to run the application:**
   (MyTimeAway /dotnet run)

6. **This editor Auto Saves the code.**

7. **To test RESTful API use POSTMAN application.**

8. **To run the test cases in CMD, Run the following command to test the application:**
   (MyTimeAway /dotnet test --logger "console;verbosity=detailed")
   (You can run this command multiple times to identify the test case status,and refactor code to make maximum test cases passed before final submission)

9. **To push the code to the git repository :**
   - **Go to (From Top Horizontal Menu Bar) View →Git Changes**
   - **Type "Your Comment" in comment box**
   - **Click on Commit All button**
   - **Click on ↑ (Up Arrow Button) to push the code.**

10. **If you want to exit(logout) and continue the coding later anytime (using Save & Exit**

option on Assessment Landing Page) then you need to first push the code to git. This will push or save the updated contents in the internal git/repository. Else the code will not be available in the next login.

11. **These are time bound assessments the timer would stop if you logout and while logging in back using the same credentials the timer would resume from the same time it was stopped from the previous logout.**

12. **You need to push your code, before final submission as well. This will push or save the updated contents in the internal git/repository, and will be used to evaluate the code quality.**
